

Cancer – Parasites Major Cause

If you or someone you know experience the following: having a great many parasites are called Virus, Germs, Bacteria, Pathogens and Etc., like Salmonella, E-coli, Cyclospora, BSE, CJD, Mad Cow, and Etc.

Many Parasites can cause Cancer, Diabetic, Aids, Hepatitis, and Etc., which affect our Organs, Body, Brains, and Etc.).

Are Parasites Feeding on You?

Do you have any of the following symptoms?

- Itchy Ears, Nose, Eyes, Anus
- Asthma & Allergies like Symptoms
- Uncontrollable Weight
- Fibromyalgia Syndrome
- Arthritis & Rheumatoid Symptoms
- Loss of Appetite, Gas & Bloating
- Constipation, Skin Problems
- Headaches, Blackouts, Fatigue
- Chronic Fatigue Syndrome (CFS)
- Toxic Overload, Stress
- Forgetfulness, Depression
- Crohn's Disease, Alzheimer
- Ulcerative Colitis, Abdominal Pains
- Diarrhea & Irritable Bowels Syndrome
- High Blood Pressure
- Thyroid Problems, Premature Aging
- Muscular & Skeletal Pain
- Wide Swings in Blood Sugar Levels
- Menstrual Irregularities, PMS, Menopause, Yeast Infection, Candida
- And many, many, more Symptoms

You may have Parasites ...

SHOCKING! More than 85% of North Americans may be infested with parasites.

These tiny and microscopic organisms can contribute to a variety of Acute and Chronic Illnesses.

Cancer – Parasites Major Cause

AMERICA'S HIDDEN EPIDEMIC - THAT CAUSES MANY DISEASE'S

We cleanse our dogs, cats, horses, cattle, sheep, goats, and etc every few months, but us, Oh no, NEVER.

Parasites go thru a phase like caterpillars.

Metamorphoses for a caterpillar to cocoon to Butterfly:

Curiously as a kid, I looked at a cocoon and found it to not look like a caterpillar or a butterfly, but found it to be all mushy and in the form of changing cells.

The same is for the fluke parasite, which gets into your intestines by mainly un-washed vegetables, as well as fish, sheep, beef, fowls, and pork.

We would in-jest the vegetables with the parasite.

The Fluke parasite can last 10 to 20 years in the body and lay thousands of eggs a day.

A parasite like a Hookworm, they put an incision on the wall of the intestines, which allows the Fluke parasites to get into the blood system.

Once the Fluke parasites are in the blood, they landed in the liver, which filters the blood.

Here is where the problem begins.

With the use of chemicals, the adult Fluke parasites goes into a metamorphose stage of change, but the chemicals like propyl alcohol and many other chemicals dissolve the tissue or skin of the cocoon of the Fluke parasite.

What is left is a mushy blob of cells metamorphosing.

These changing cells will flow out of the liver and land in the weakest joints, organ, tissue or skin and start changing the cells around the parasite cells. This is now the start of Cancer.

This abnormal growth of tissue starts to spread or become a tumor.

All cancers and many other diseases are caused by "parasites, toxins, and pollutants" and can be cured by killing the parasites and ridding the body of environmental chemicals.

Cancer – Parasites Major Cause

Parasites defecate all the time and causing toxins from it.

When you kill this parasite, the cancer stops after a time.

The tissue becomes normal again, soon.

This parasite typically lives in the intestine where it might do little harm, causing only colitis, Crohn's disease or irritable bowel syndrome, or perhaps nothing at all.

Parasites in the Liver; causing cancer, or uterus; causing endometriosis, or thymus; causing AIDS, or kidney; causing Hodgkin's disease or the pancreas; causing diabetes; the brain; causing Alzheimer's disease; the prostate; causing prostatitis.

Clearly, you must do 3 things: (1) Kill the parasite and all its stages; (2) stop letting propyl alcohol into your body; and (3) flush out the metals and common toxins from your body so you can get well.

Three herbs, used together, can rid you of over 100 types of parasites: black walnut hulls, wormwood, and common cloves. But the amino acids ornithine and arginine improves this recipe.

No, matter what kind of cancer you have (or pains or weakness); a complete program of lifting the burdens on your immune system will miraculously clear it up.

Only three things causes' diseases; 1) Parasites, 2) Toxins 3) Chemicals or Malnutrition.

Accidents and injuries do not cause diseases.

Cancer – Parasites Major Cause

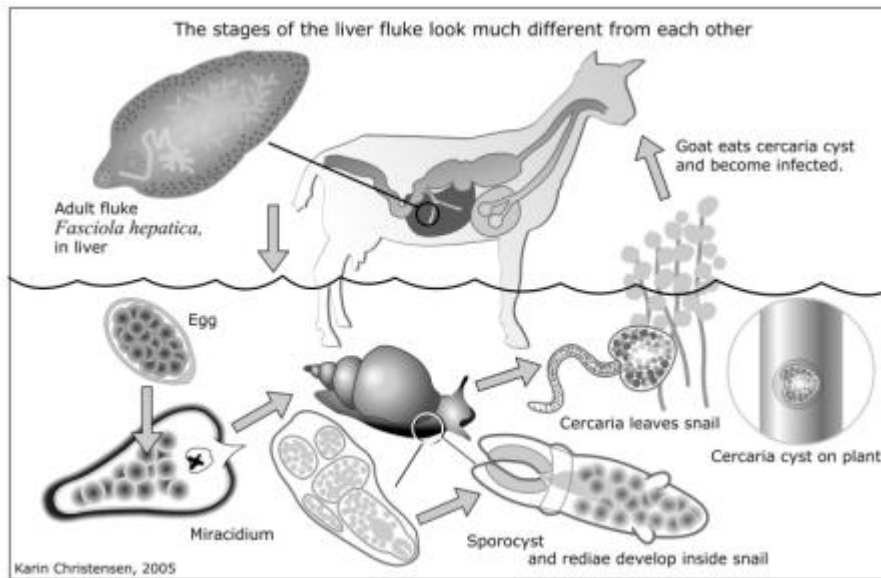

Flukes (Trematodes), or flatworms, are likely the most common form of parasite found in humans worldwide. These commonly infect everyone's intestines and other tissues including the heart, lungs, liver and kidneys. All Flukes are terribly difficult to get rid of once infected, accumulating over a period of 10 to 20 years.

The largest intestinal Fluke: *Fasciolopsis buski*

Fleshy, red and beef-colored, Flukes attach themselves within the mucosa of the small intestine. Living up to one year per adult organism, they proliferate easily and spread to other organs. Transmission is through unwashed vegetables, as well as fish, sheep, beef, fowls, and pork. Although they normally develop outside the body, new theories suggest that when "propyl alcohols" are used or consumed (either in foods or cosmetics), they provide the fluke with an environment which enables it to complete its entire life cycle within man. This allows the fluke to migrate throughout the body, thus infesting every tissue and organ with which it comes into contact.

Cancer: Caused by Fluke parasites.

Cancer – Parasites Major Cause

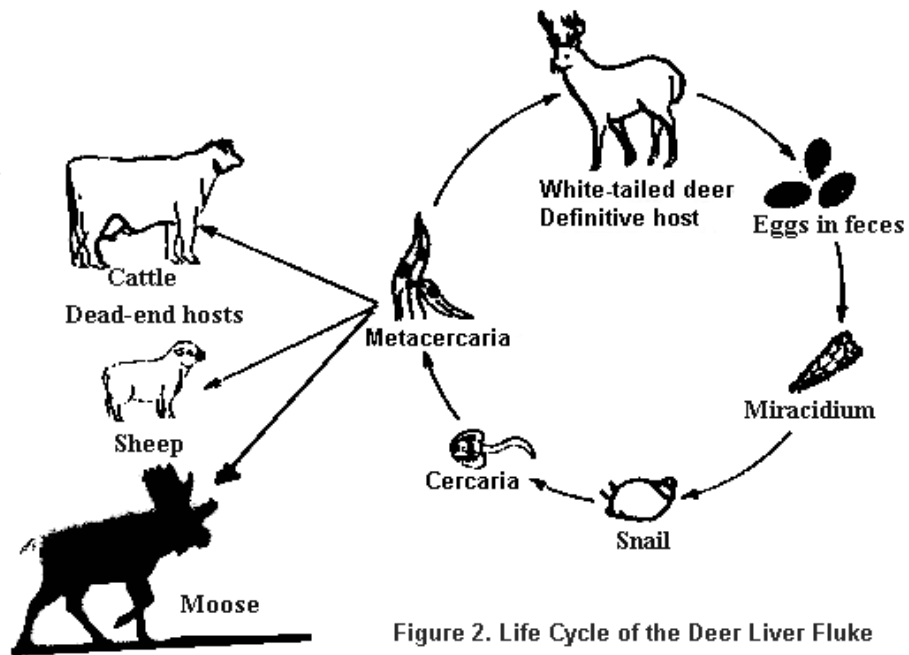

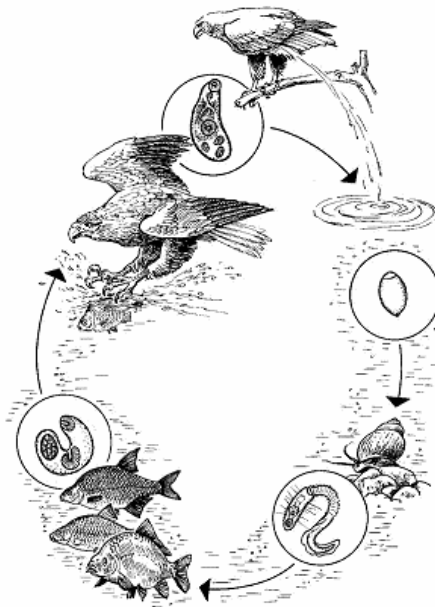

Figure 2. Life Cycle of the Deer Liver Fluke

Cancer – Parasites Major Cause

~12 weeks from infection to adult, egg-laying fluke

Cancer – Parasites Major Cause

Immature eggs are discharged into the intestine and stool (1). Eggs become embryonated in water (2), eggs release miracidia (3), which invade a suitable snail intermediate host (4). In the snail the parasites undergo several developmental stages (sporocysts (4a), rediae (4b), and cercariae (4c)). The cercariae are released from the snail (5) and encyst as metacercariae on aquatic plants (6). The mammalian hosts become infected by ingesting metacercariae on the aquatic plants. After ingestion, the metacercariae excyst in the duodenum (7) and attach to the intestinal wall. There they develop into adult flukes (20 to 75 mm by 8 to 20 mm) in approximately 3 months, attached to the intestinal wall of the mammalian hosts (humans and pigs) (8). The adults have a life span of about one year.

Fig. 1. The life cycle of *Diplostomum spathaceum*. Parasites reproduce sexually in the intestine of fish eating birds such as gulls (1), and release eggs (2), which then hatch into free-swimming miracidia (3). Miracidia infects the fresh water snail (4) and commences asexual reproduction giving rise to thousands of cercariae (5). Cercariae penetrate fish and establish in the lens of the fish eye and develop to metacercariae (6). The life cycle is completed after infected fish is eaten by bird. The life cycle of the other species used in the study, *D. gasterostei*, is similar except the metacercariae are found in the vitreous body of the fish eye.
